Reading the monsoon in a three-year campus rainfall series

Kavya Suresh
Fictional Government College, Kozhikode

Abstract — This sample shows typography, heading levels, captions and references for a paper of up to ten pages. The data and findings are invented. A paid order formats the student's own paper (margins, type, citations) without changing the academic argument unless the student asks for language edits as a separate brief.

1. Introduction

Small institutional weather records are often incomplete. This sample paper describes a simple, documented method for flagging unlikely jumps in a daily rainfall series, so that a later study can decide what to treat as missing.

2. Method

Daily totals were ordered by date. Gaps were marked, not filled. A jump was flagged when a day's total differed from the previous non-missing day by more than a threshold agreed in advance. The threshold and every exception were written in a lab note.

3. Sample table

Month (sample)	Days with data	Days flagged
June	28	2
July	31	1
