SAMPLE – FICTIONAL DETAILS · NOT A REAL PERSON, BUSINESS OR OFFICIAL FORM

Interview prep pack

Prepared for Rohan Pillai (fictional) · Target: Mechanical Engineer, UAE yard · Sample – fictional details. The people, employers, universities and addresses do not exist.

1. Role summary

The sample job is a maintenance engineer in a shipyard. Interviewers usually test safety habits, planned maintenance, and how you describe a failure you actually closed out.

2. Likely questions, with short answer notes

Question	What to cover
Walk us through a breakdown you owned.	Pick one pump or compressor. State the symptom, the check you ran, the part you changed, and what you changed in the plan so it did not repeat.
How do you work a permit to work?	Name isolation, gas test if needed, toolbox talk, and who signs. Do not invent a system you have not used.
How do you handle a disagreement with a supervisor on the floor?	Stay on the safety point, offer a short option, and record the decision in the log.
Why the Gulf, and why this yard?	One honest sentence on the kind of work, not a speech about salary.

3. Questions you can ask

- Which CMMS do you use, and who writes the standard jobs?
- What does the first six weeks of induction look like for a new engineer?

4. Practical notes

Carry a printed CV, a short list of shutdowns you have worked, and passport-size photographs if the advert asked for them. Join the call five minutes early. This pack is a sample of tone and structure, not advice for a real vacancy.
